Subject: Notes from meeting

Corine, Clancy, Randy, Enrique, Harry
Dr Benn NNEPA, Yolanda Barney NNEPA water, Jesse Delmar Div of Public Safety (jdelmar@navajonnsn.org)

Harry and Enrique provided a Background update

Some Qs

Dr Benn - where is the slug currently? Nattis - Farmington downtown.

NPS Delmar - how long is the slug and how long does it take to dispartate? 2-3 days. NNEPA asked that we Resend water data.

Yolanda outlined some facilities of concern:

Red Mesa/Mexican Water community - 4 corners regional plant provides water

Hogback Feeder Canal - irrigation water only

Montezuma Creek 300 ft deep near the river - of concern and should be monitored

Mexican Hat/Bluff water system on NTUA water

Page surface water plant and Navajo Generating Station get San Juan water and should hear from EPA.

Staffing

Region has 2 contractors working on river sampling (both systematic and special case) from Hogback up to Mex Hat and repeating. Two additional contractors coming.

David and Secody deploying to provide community outreach support.

EPA has 2 in Durango coordinating w R8

Community outreach

Team intends on having Chapter meetings and then public meetings as soon as Monday. Jesse Delmar DPS has a command post in Aztec. Harlan Cleveland PIO POC for DPS. Chapters potentially affected are:

Navajo Mountain, Oljato, Montezuma Creek, and Shiprock

Outreach

Navajo Generating Station, San Juan County UT, and City Of Page need follow up.

Next Steps

Corine and Yolanda to work on list of water resources especially private wells in San Juan River valley.

Share with Randy, Rob

Secody and David to work w DPS and with Chapters in preparation for a public meeting.
